

ABOUT

InvisaFil™ is a very fine thread that can be used in the needle and as a premium bobbin thread for embroidery. You can also use it for hand and machine appliqué, stitch in the ditch, free motion quilting, stippling, general sewing on fine fabrics, hemming etc.

APPLICATIONS

Use InvisaFil™ in sewing machines, embroidery machines, quilting machines, and handwork.

SPOOL POSITION:

When using the 400m reel on a vertical spool pin, a piece of felt under the reel prevents the ultra fine thread from sliding down and wrapping around the pin. For optimum results with the 2500m cones, use of a Thread Tamer™ is strongly recommended.

SEWING:

You *may* need to adjust the top and/or bobbin tensions slightly. Sew at a moderate speed. Hold on to the tails and start and stop slowly. Turn off the stitch regulator as it may fail to detect the ultra fine thread. Low bobbin sensors will give an inaccurate reading.

Avoid using automatic scissors.

THREAD

100wt - 2ply cottonized polyester. An ultra fine polyester with cotton-like characteristics and negligible stretch.

Finish: slight sheen

BOBBIN THREAD

- InvisaFil™
- DecoBob™

RECOMMENDED NEEDLE SIZES

Machine:

- 60/8, 70/10, 80/12
- 75/11, 90/14 quilting
- longarm - 16

Hand:

#11 or #12 sharps

USES:

Use whenever you want the thread to “disappear”. An ideal bobbin thread for machine embroidery, the ultra fine thread adds negligible bulk and feels soft in the hand.

STITCH LENGTH:

When using InvisaFil™ in the top and in the bobbin, shorten straight stitch to 1.0 - 1.5. For added security, backstitch at the beginning and end of each seam.
